EDUCATION

Stony Brook University

Master of Science (M.S.) in Data Science

Relevant Coursework: Large Language Model Frontier, Database Systems, Statistical Computing, Statistical Learning, Probability, Data Structures and Algorithm

Stony Brook, NY

Aug 2025 – May 2027

Gujarat Technological University

Bachelor of Engineering (B.E.) in Computer Engineering

Relevant Coursework: Distributed System, Operating Systems, Computer Networks, Database Management Systems

Ahmedabad, GJ

Aug 2021 – May 2025

TECHNICAL SKILLS

Languages: Python, Java, C++, Go, JavaScript, TypeScript, SQL

Frameworks: FastAPI, Flask, PyTorch, TensorFlow, Scikit-learn, Hugging Face Transformers, LangChain

Cloud & Systems: AWS (EC2, S3, Lambda, SageMaker), Docker, Kubernetes, Jenkins

Core: Machine Learning, Deep Learning, Natural Language Processing (NLP), Large Language Models (LLMs), Distributed Systems, Backend Engineering, APIs, ETL Pipelines

RELEVANT EXPERIENCE

Graduate Research Assistant

Stony Brook University (Under Dr. Farukh Khurashi)

Jan 2026 – Present

Stony Brook, NY

- Conducting large-scale **clinical and population health data science research** using N3C (National COVID Cohort Collaborative) EHR datasets
- Working with **high-dimensional patient data (300K+ records)** to model **disease progression, comorbidities, and treatment outcomes**
- Designing **data preprocessing, feature engineering, and cohort selection pipelines** for large-scale observational studies
- Applying **statistical modeling techniques (logistic regression, interaction models, threshold analysis)** to identify predictors of clinical outcomes
- Building reproducible **analysis pipelines and validation frameworks**, including **sensitivity analysis and stratified modeling**

Goldenmace IT Solutions

AI Developer Intern

Jan 2025 – Jul 2025

Mumbai, MH

- Designed and deployed **5+ containerized NLP microservices** using FastAPI and Docker, supporting REST API integrations with **99.9% uptime** in production environments under concurrent traffic
- Built and optimized Transformer-based classification pipelines across **3 multilingual datasets**, improving model accuracy by **22%** while maintaining efficient inference performance
- Developed and automated **CI/CD deployment workflows** using Jenkins and AWS, reducing release cycles by **45%** and minimizing manual deployment errors

IBM

AI Engineer Intern

Jun 2024 – Aug 2024

Ahmedabad, GJ

- Improved Transformer-based document understanding models, achieving **14% increase in F1-score** on enterprise-scale datasets through architecture optimization
- Designed and deployed ML pipelines on AWS SageMaker with **distributed training and autoscaling**, reducing inference latency by **27%** and compute cost by **18%**
- Built scalable **data ingestion and ETL pipelines** using PySpark, SQL, and AWS Lambda, processing **1M+ records/day** and improving throughput by **35%**

PROJECT EXPERIENCE

Multi-Modal AI Assistant, Independent Systems Project

Apr 2025 – Present

- Built a local-first multimodal AI system using LangChain, Chainlit, and Ollama, enabling RAG-based interactions across **5+ data modalities** (PDFs, images, code, CSV, web)
- Integrated speech-to-text, text-to-speech, and persistent memory, improving response consistency by **35%** and reducing query latency by **28%**
- Designed modular retrieval pipelines with chunk ranking and citation tracking, supporting **1000+ document pages per session** with grounded responses

Automated Resume Screening System (RAG Pipeline), Research & Development Project

Nov 2024 – Feb 2025

- Developed an LLM-powered resume screening system using FAISS and RAG Fusion, achieving **91% precision** across **10,000+** resumes
- Built a full-stack application with backend APIs and Streamlit interface, reducing manual screening time by **65%** while maintaining explainable outputs
- Implemented ranking evaluation and validation pipelines, improving model reliability and reducing false-positive matches

PUBLICATION

- Co-author on **9+ accepted research abstracts** leveraging ACS NSQIP, SEER, and N3C datasets focused on **surgical outcomes, risk modeling, and healthcare disparities**
- Conducted population-scale analyses on **300K+ patients**, contributing to research on **operative complexity, infection risk, and postoperative outcomes**
